

Cosmo White Paper

1. Introduction

The modern world faces growing challenges related to the restriction of personal freedoms, censorship, and the reduction of cash in favor of state-controlled digital payment systems. The Cosmo project was created for those who seek to build and support communities independent of government structures, striving for broad adoption of cryptocurrencies in everyday life. Our goal is to create an ecosystem that resists external attempts to restrict civil liberties while offering cheap, fast transactions and user-friendly tools.

2. Project Goal

Cosmo aims to:

- **Promote and facilitate the adoption of cryptocurrencies** in daily life as an alternative to traditional financial systems.
- **Build a censorship-resistant community** whose actions are independent of state organizations and regulations.
- **Ensure security and freedom** for all participants in the ecosystem, enabling them to use financial tools free from external controls.

3. Technology Choice

The Cosmo project chose to develop within the **Cosmos** ecosystem for several key reasons:

- **Low transaction costs:** The Cosmos ecosystem offers cheap and fast transactions, crucial for broad adoption in everyday life.
- **Advanced cryptocurrency wallets:** The availability of well-integrated and secure wallets, such as **Keplr** and **Leap**, allows users to easily store and manage Cosmo tokens.
- **Scalability and interoperability:** Cosmos enables the creation of sovereign blockchains that can interact with each other, which aligns perfectly with our vision of independence from central structures.

4. Tokenomics

The project creator has issued **21,000,000 Cosmo tokens**, which have been placed in liquidity pools **1992** and **2159** on the decentralized Osmosis exchange. The purchase of tokens from these pools is the only method of distribution, ensuring a fair allocation of the initial tokens. No tokens have been reserved for the team or any other purposes in this initial issuance.

If the price in the specified pools exceeds **10 USD**, an additional **1,000,000 tokens** will be minted and allocated for development. Similarly, if the price surpasses **20 USD**, an additional **2,000,000 tokens** will be minted for development, and this pattern will continue, with new tokens being minted after every successive 10 USD price increase.

The newly minted tokens for development will be distributed as follows:

- **30%** for developers
- **30%** for marketing
- **30%** to increase liquidity on decentralized exchanges
- **10%** for airdrops

Token Supply:

- **Total Supply:** 21,000,000
- **Circulating Supply:** 21,000,000
- **Max Supply:** Unlimited

5. Use Cases

The Cosmo token is intended for:

- **Everyday transactions:** Payments for goods and services within and beyond the community.
- **Building independent ecosystems:** Creating and supporting local communities that operate outside traditional financial systems.
- **Rewarding participants:** Both for participating in the ecosystem and for supporting its growth.

6. Team

The Cosmo project is led by a group of blockchain technology enthusiasts and advocates of financial freedom and independence. The team consists of experienced developers, economists, and cryptography specialists working together to create a censorship-resistant and independent financial ecosystem.

7. Business Model

Cosmo plans to grow by:

- **Supporting the broad adoption** of cryptocurrency in daily life, which will increase demand for tokens.
- **Introducing additional services and products** based on Cosmo tokens, such as exchange platforms, payment apps, and digital asset management tools.
- **Partnerships with local communities** and businesses that support our vision of freedom and independence.

8. Roadmap

Instead of a rigid, time-based schedule, Cosmo's roadmap will depend on the **level of token trading activity** and community engagement with the project. Reaching key milestones will be linked to token activity and adoption within the ecosystem.

- **Phase 1:** Upon reaching a certain level of token trading volume - integration with major cryptocurrency wallets (Keplr, Leap) and launch of the information campaign.
- **Phase 2:** As activity grows further - introduction of the early participation reward mechanism and building the first communities.
- **Phase 3:** Upon achieving a sufficient scale of trading volume - ecosystem development, establishment of initial strategic partnerships, and further token adoption.

9. Legal Aspects

Cosmo aims to operate in compliance with applicable legal regulations in countries where possible while maintaining maximum independence and anonymity for users. Priority is given to countries with a liberal approach to cryptocurrencies, where it is possible to operate without excessive restrictions.

10. Community and Marketing

Cosmo places a strong emphasis on building an engaged community through:

- **Activity on social media:** Regular announcements, discussions, AMAs (Ask Me Anything).
- **Partnership programs and airdrops:** Incentives for early users and those who promote the project.
- **Education:** Creating educational content about financial freedom, cryptocurrency security, and independence from central systems.

Cosmo is a project focused on action. Instead of promising, we are delivering on our vision step by step. We believe that only in this way can we contribute to building a future based on freedom and financial independence.
